

The Suez Canal Zone of Egypt

1950-1955

Not to scale

Weather outlook for the Canal Zone issued by No. 1 Meteorological Unit, Ismailia, 21st December 1951.
 Winds S. to SE. 8-10 knots.
 Visibility poor due to rising sand.
 Temperatures:
 Ismailia 45 Min. 70 Max.
 Fayid 45 Min. 78 Max.
 Shallufa 45 Min. 69 Max.

For clarity reasons, link roads, other minor roads, the north/south branch of the Sweet Water Canal and the Port Said to Suez railway have been omitted. As the map is not to scale, the places and camps shown may not be exactly in the correct position, but to the best of my knowledge they are very close. I thank those Suez Veterans who supplied information reminding me of the whereabouts of some of the camps.

Richard Woolley.
